He who lived with love never dies.
Hafez, the great Iranian Poet (ca. 1315 – 1390)

It is with deep sorrow that we announce the passing away of Dr. Touraj Nayernouri on July 5, 2021 in Tehran due to COVID-19 at the age of 78. He was an outstanding neurosurgeon with a neurophysiological background. His demise is a great loss for his family, the Iranian medical community, in particular for neurosurgeons and the editorial team of the Archives of Iranian Medicine (AIM) Journal.

Touraj Nayernouri was born in Tehran on February 3, 1943. At the age of 12 (in 1955), he was sent by his family to England, first to a preparatory school in Ascot (Berkshire) and then to Public School in Shropshire. In due course, in 1963, he enrolled at the Trinity College in Dublin, where he initially obtained a B.A. degree in English literature, and subsequently, he studied medicine and received his MD diploma. His thesis subject was ‘The innervation of brown adipose tissue in newborn rabbits’.

In 1972, he went to Canada as a post-doctoral fellow of Medical Research Council of Canada, at the Department of Physiology of University of Western Ontario and studied ‘the hypothalamic connections to the sympathetic neurons of the spinal cord’ and later became a resident of neurology at the University Hospital in Ontario. In 1975, he went to Glasgow, Scotland and later to Newcastle, England for his neurosurgical training, where he obtained his fellowship in general surgery as well as the fellowship in neurosurgery.

He always loved his homeland and after his long training course in the high-ranking institutions abroad, he dreamed of returning to Iran to serve. At that time, he was 41 years old, active, energetic and very optimistic. On his return to Iran in July 1986, he joined the Medical Faculty of Iran University of Medical Sciences and practiced for several years at the Department of Neurosurgery in the Firoozgar educational Hospital, Tehran.

Since the first years of the establishment of the AIM Journal, he was an influential member of its editorial board and an active peer reviewer since April 2000 (Figure 1).

Dr. Nayernouri was greatly interested in neuroscience and neurosurgery, history (Figure 2), especially history of medicine in Iran and literature as well as medical journalism. He always appreciated the scientific efforts of the Iranian medical pioneers (Figure 3). He was a prolific...
and creative author who wrote many articles in Persian and English. Several articles have been authored by Dr. Nayernouri which are indexed in the PubMed database. His last paper, which he wrote just before his recent illness in 2021, entitled ‘The Expectant Brain and the Placebo Magic. Does it have a Survival Value?’ appeared in the pervious issue of the AIM journal. In 2017, he collected his articles, mainly on the history of Medicine in Iran as well as a few essays on science in a book entitled: "Iranian Medical Histories and other Essays" (Figure 4a). The book consists of two parts. The first part deals with the history of medicine in Iran and the second part contains the following essays:

- Fraud and dishonesty in scientific publication
- Bias in science
- Concepts in physics
- Kwarazmi, Algebra, zero and the decimal system
- Science seeks the how, not the why. It deals with reality, not with truths.

The above-mentioned topics clearly show the scientific concerns of Dr. Nayernouri, as in the introduction of his book he stated, “The final few essays have touched upon science and its relation to reality and truth, a subject that concerns me deeply.” He also delivered several scientific lectures at seminars ranging from evolution and animal behavior to cognitive neuroscience. He also wrote a book in Persian entitled: “The Character of Rostam in Shahnameh” (Figure 4b).

Dr. Nayernouri and his Colleagues’ Works on PubMed, between 1971 and 2020:

4. Sheibani M, Nayernouri T, Dehpour AR. Herbal...
Dr. Touraj Nayernouri (1943-2021) and his Fruitful Academic Life

In summary, although he passed away, his memory will remain alive in the Iranian medical community, among neurosurgeons and the editorial team of the AIM Journal (Figure 5). Dr. Nayernouri was a scientist physician with high morals, who loved kindness, beauty, goodness and truth.

Figure 5. Memorial of the Late Dr. Nayernouri at the AIM office, Wednesday, July 7, 2021 (With special thanks to Miss Shokoufeh Borzabadi PhD, executive director of the AIM).
