Table S1. Comparison of In-hospital Major Adverse Events (+acute renal failure) across Ethnic Groups among Patients Undergoing Isolated on-pump CABG Surgery.						
In- hospital outcomes	Ethnic group		Crude OR (95 % CI)	P value*	Adjusted OR (95% CI)	P value**
	Non-Turkmen (n=3331)	Turkmen (n=301)				
MACCEs, n (%)			1.42 (0.87, 2.32)	0.164	1.44 (0.71, 2.92)	0.313 [‡]
Yes	151 (5.0)	19 (6.0)				
No	3180 (95.0)	282 (94.0)				
OR, Odds ratio; CI, Confidence Interval; P value, Probability value; MACCEs, major adverse cardiac and cerebrovascular events (i.e., MI, Stroke, cardiovascular death, and acute renal failure); AF, Atrial fibrillation. *Statistically significant (P<0.2). **Statistically significant (P< 0.05). [‡] Adjusted for opium consumption, smoking status, number > 3 grafts, Cardiopulmonary bypass, and clamp time.
